

A photograph of a large, curling ocean wave. The water is a deep teal color, and the crest is breaking into white foam. The sky is a clear, light blue. The text "Japan - 11 March 2011" is overlaid in the center of the image.

Japan - 11 March 2011

Japan, 11 March 2011

- On 11 March 2011, as we were finalizing the production of these videos, a massive earthquake (Richter 8.9) and tsunamis hit Japan
- These images give some indication of the horror of the experience and the massive damage done by some quite small waves
- This DVD presents a wide range of evidence that indicates that at some stage in the history of the earth waves hundreds of times greater than these rampaged the earth together with massive earth movements and totally re-formed the surface of the earth
- We consider evidence that every land form that you are familiar with is a consequence of massive earth movement and massive water forces
- And we consider the possibility that this did not happen so long ago and that it warns of a possible future judgment

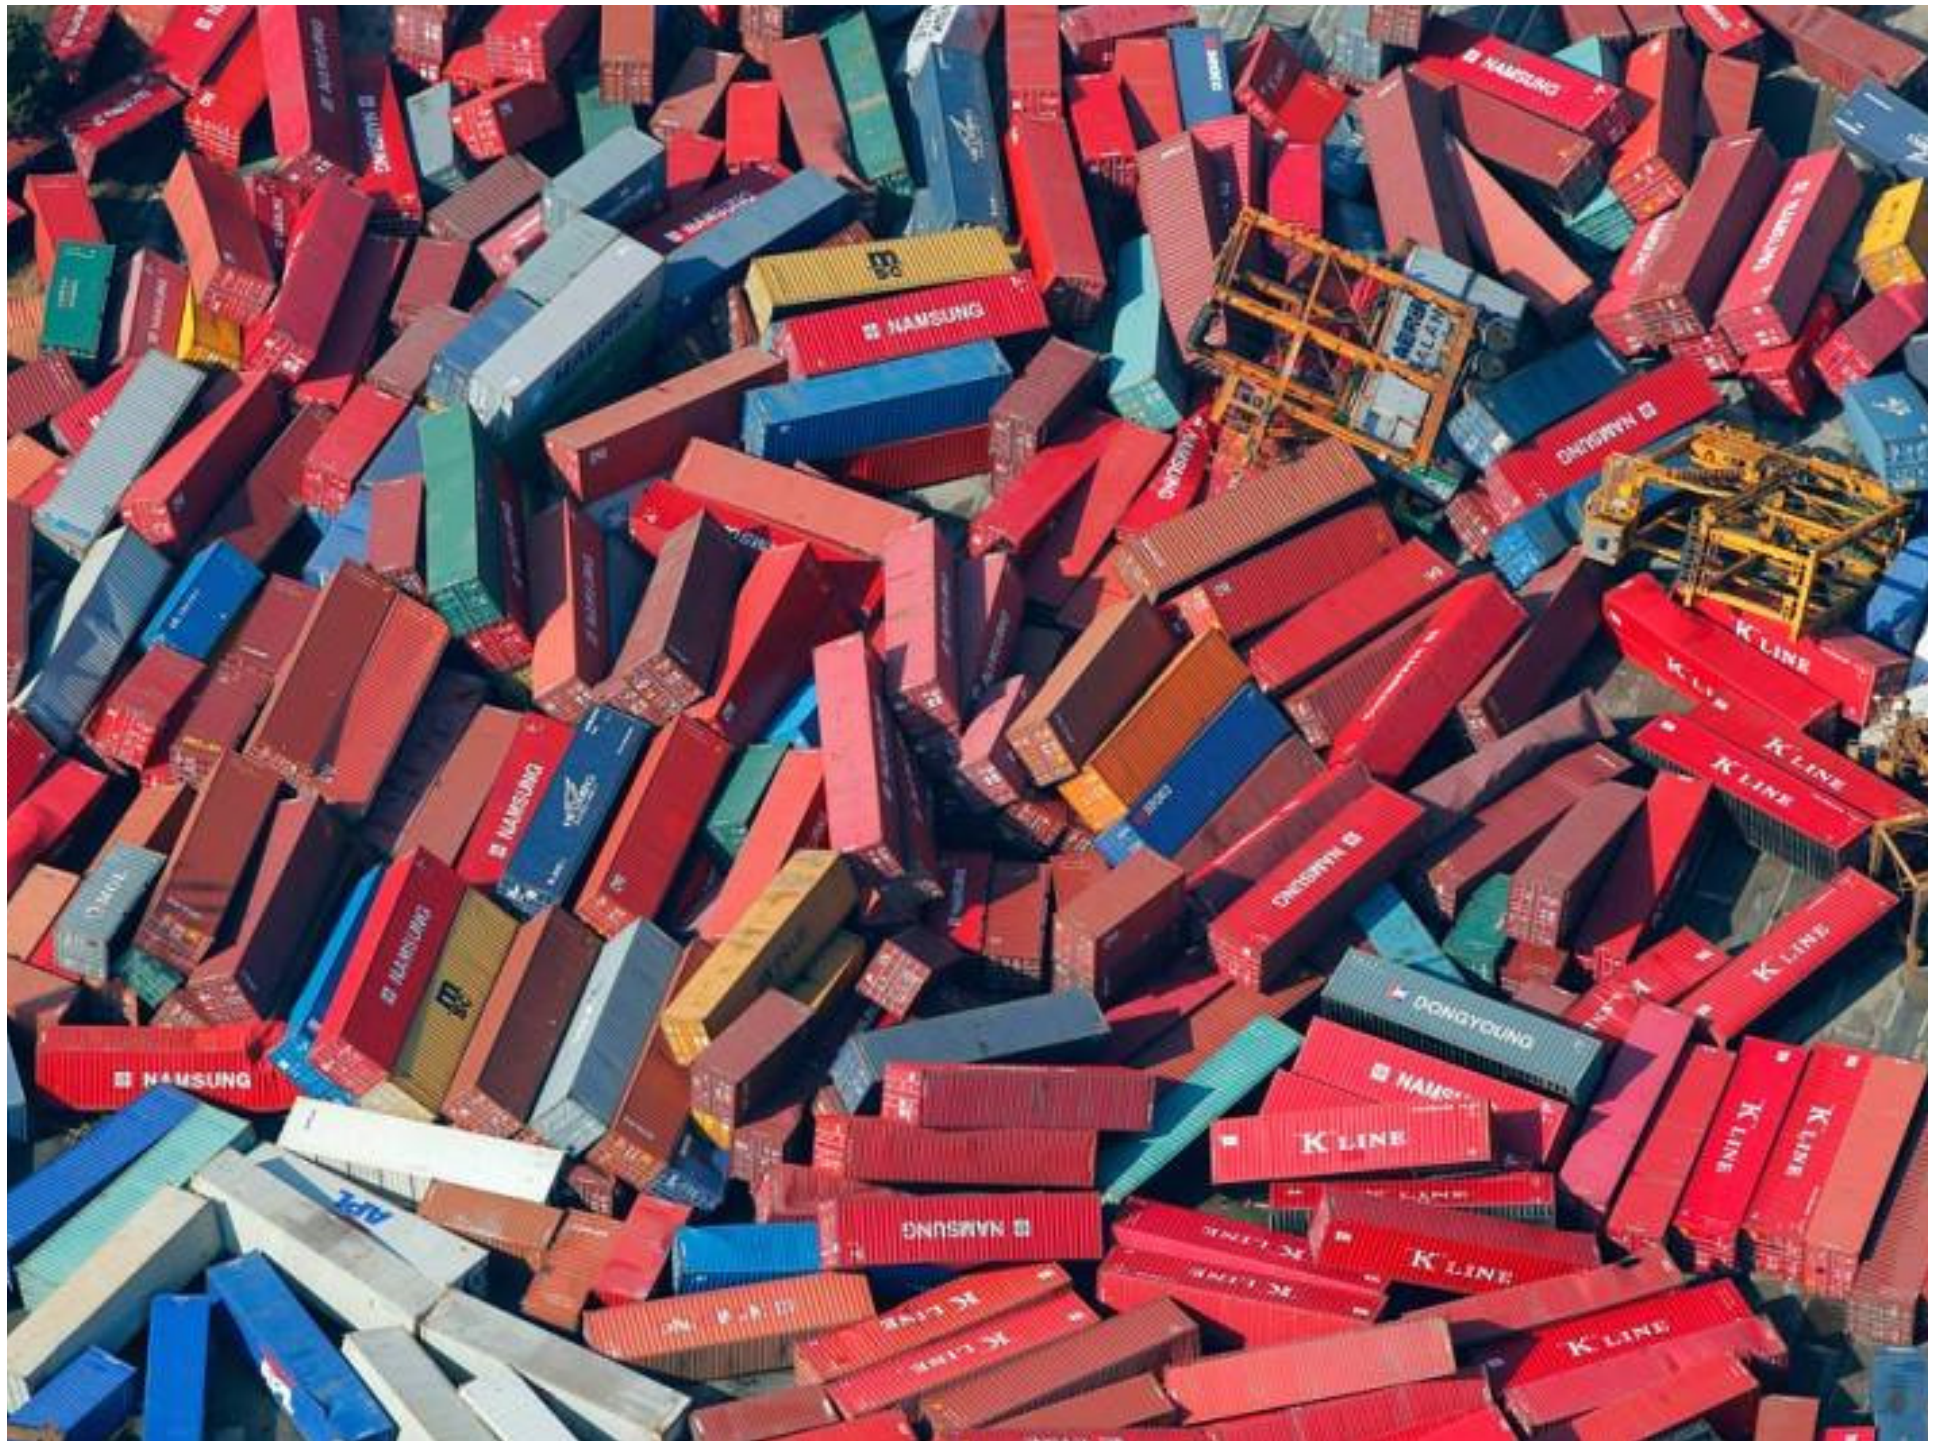

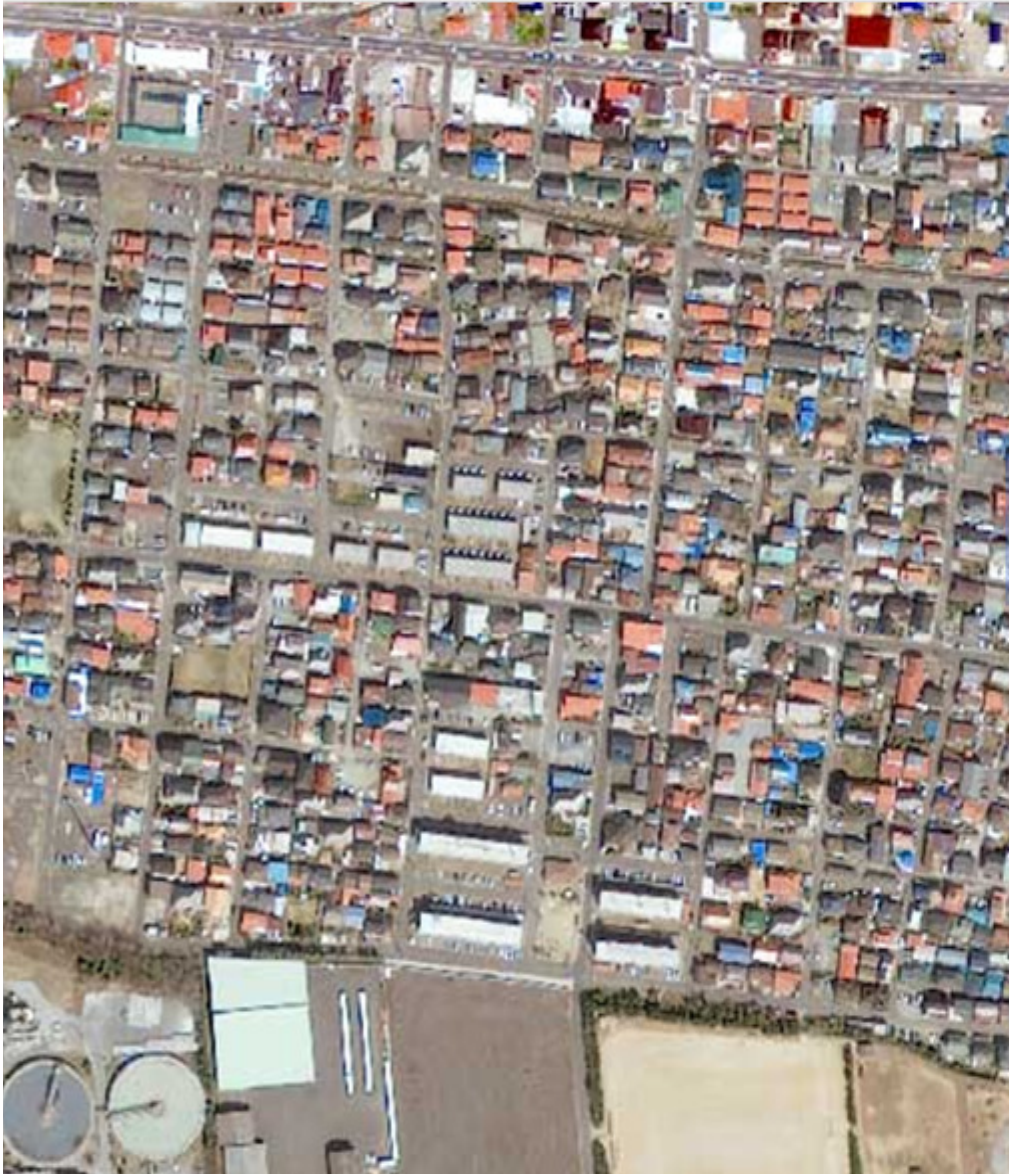

North of Sendai

This area, which includes Minamisanriku and the Onagawa nuclear plant, was closest to the epicenter of the quake. In Minamisanriku alone, more than 10,000 people are missing.
